BARRIERS

Barriers from Steel Constructions are indestructible. For as the first and only producer in the Netherlands, Steel Constructions makes barriers with fibreglass rails.

Fibreglass rails are lightweight but sturdy. They are also maintenance-friendly and durable. Steel Constructions designed the barriers with fibreglass rails in 2007 and its product is now used by 90 per cent of all the big hire companies.

That should not come as a surprise since aluminium barriers often get stolen and barriers with wooden rails only have a limited service life.

Hot-dip galvanised

We supply barriers with plastic or steel post feet, galvanised Y-shaped or A-shaped legs and braces. Barriers with a steel frame are hot-dip galvanised in accordance with NEN 1461. All our barriers comply with CROW regulations.

All our barriers are available directly from stock.

BARRIERS

Our barriers with fibreglass rails can be supplied in any size required. Our standard barriers have 1.50 and 2.50 metre rails, possibly with a coating in your chosen RAL colour.

Class II or III retroreflective film can be applied to one or both sides of the rails. Your logo can also be displayed on the rails. The barriers are designed and produced by Steel Constructions in-house.

Sturdy

Our safety barriers with fibre-glass planks are indestructible.

Quick

Our modern plant guarantees a rapid production process.

Persoonlijk

Our safety barriers can be supplied with your own logo on them.
