

A FORCE TO BE RECKONED WITH IN THE PRODUCTION OF TRAFFIC FACILITIES

Lighting column bases

Rearranging an intersection is always a complex task. Fortunately, you can rely on sturdy lighting column bases from Steel Constructions so that traffic can continue to flow safely while works are being carried out

Each of the high-quality lighting column bases from Steel Constructions can take a maximum of four traffic lights. There is space for overrun columns to which you can attach the cables required.

Stormy weather or rain: lighting column bases from Steel Constructions will always stand steady. Their heavy-duty construction means that they are also 100% vandal-proof. However, that doesn't mean that the bases are not easy to move around: they can be moved using a forklift truck or crane truck.

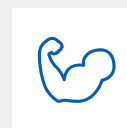

Lighting column bases

One of the great features of our lighting column bases is that they are stackable. As a result, they are easy to store and easy to transport.

Naturally, our lighting column bases comply with all statutory requirements relating to reflection and safety.

Strong

Thanks to their heavy-duty construction, our stacking racks are designed to take heavy loads.

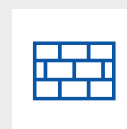

Movable

Easy to move using a forklift truck or crane truck

Stackable

In order to save space, you can stack our bins up to 10 metres high!
